## For Immediate Release

### Newest Release of Digital Phasing/Voltage Testers are Cordless; Enhancing Safety and Reducing Volume of Tools on Trucks

Hi-Line Utility Supply Company is pleased to enable linemen to remove one more obstacle to their safe return after working on high-voltage lines in the field: The cord currently strung between most phase testers being used today.

The newest product on the market combines the functions of multiple testers and meters, eliminating weight and clutter on trucks, and is cordless, meaning the elimination of one more danger to workers' safety.

The **Cordless Digital Phasing Tester** (Hi-Line's part number PD800WU) allows linemen to test for phase sequence and angles, voltage ranges between 4kV and 69kV and operates at a range of up to 100 feet.

One kit allows linemen to test three-phase secondary systems, capacitive test points, URD (Underground Rural Distribution) systems (up to 35kV), as well as overhead and transmission/substation systems (up to 69kV), replacing multiple older model tools.

The product is designed to function seamlessly in harsh weather and darkness, with backlit displays and easy-to-read high-intensity, color coded lights. Additionally, the tool offers linemen many choices in how to display information, via degrees or kV measurements.

*Cordless tester kit comes with everything shown including: Reference probe (transmitter) and Meter probe (receiver). Hi-Line also includes Universal attachment with each order.*

*Cordless testers eliminate one obstacle to linemen's safety: the cord!*

Call a Hi-Line customer service representative today to get more information on this and many other winter tools at 800-323-6606. Also visit us online at [www.hilineco.com](http://www.hilineco.com).
